

FISHERY By-Product SURVEILLANCE REPORT

IFFO GLOBAL STANDARD FOR RESPONSIBLE SUPPLY OF FISHMEAL AND FISH OIL

FISHERY By-Product:	Haddock (<i>Melanogrammus aeglefinus</i>)
LOCATION:	UK & Ireland-Ices Area IVa-c, VI a, VIIa,b,d-h,j2
DATE OF REPORT:	19/02/2012
ASSESSOR:	Sam Peacock

Global Trust Certification Ltd, quayside Business Centre, Dundalk, Co. Louth, Ireland Tel: 042 932 0912 Fax 042 938 6864

Form No: 9	Report Ref: UK	Page 1 of 5	CCM Code:
------------	----------------	-------------	-----------

1. APPLICATION DETAILS AND SUMMARY OF THE ASSESSMENT OUTCOME		
Name:		
Address:		
Country:	Zip:	
Tel. No.	Fax. No.	
Email address:	Applicant Code	
Key Contact:	Title:	
Certification Body Details		
Name of Certification Body:	Global Trust Certification Ltd.	
Assessor Name	Peer Reviewer	Initial/Surveillance/ Re-certification
Sam Peacock	Mike platt	Surveillance
1. Scope of Assessment		
		By-Product surveillance
2. Fishery By-Product		
		Haddock (<i>Melanogrammus aeglefinus</i>)
3. Fishery By-Product Location		
		UK & Ireland-Ices Area IVa-c, VI a, VIIa,b,d-h,j2
4. Fishery Method		
		Demersal trawlers (single, twin and pair), otter trawls and (to a lesser extent) seiners.
5. Outcome of Assessment		
		Maintain approval

2. GUIDANCE FOR ONSITE ASSESSMENT

3. ASSESSMENT DETERMINATION

There is a robust fishery management framework at the EU and UK & Ireland levels, which is applied specifically to haddock in the assessment area. Management is supported by species-specific data collection and stock assessment. Haddock is categorised as 'vulnerable' by the IUCN but has been certified under the MSC standard in several European fisheries. As there have been no significant changes since the initial assessment, the assessment team recommends maintaining the approval of this byproduct material.

4. RATIONALE OF THE ASSESSMENT OUTCOME

A. THE MANAGEMENT FRAMEWORK AND PROCEDURE

LEVEL OF COMPLIANCE	
<i>The management of the fishery used to produce the By- Product must include a legal and administrative basis for the implementation of measures and controls to support the management of the fishery.</i>	
LOW	There is no satisfactory legal and management framework for fisheries in the region.
MEDIUM	An administrative and legal framework that underpins management of fisheries in the region is established, but it is not directly applied to the byproduct stock under assessment.
HIGH	A legal and administrative framework that ensures an efficient management for fisheries in the region is established and applied specifically to the byproduct stock under assessment.

Determination: *There are effective fishery management frameworks in place at the EU and national levels, and these frameworks are applied specifically to the byproduct species under assessment. Although the precise level of species-specific management varies between haddock stocks, the assessment team consider a rating of high compliance to be appropriate.*

H

Fishery management framework:

The UK & Ireland are members of the European Union and therefore in Community waters implement the Common Fisheries Policy (CFP). In force since 1983, the CFP aims to reconcile resource conservation with the preservation of income and jobs in coastal zones that offer few alternatives in terms of production or employment. It therefore covers not just resources but also markets and structures.

With regard to resource management, the CFP regulations comprise:

- A traditional management tool based on TACs and quotas;
- Technical measures relating to gear or catch;
- Effort-related management, based on vessel engine power and the number of days at sea.

The CFP also provides for the introduction of measures to rebuild, over a period of several years, stocks that are threatened in terms of sustainable harvesting, and for recourse to effort-related management rules to supplement TACs and quotas. An extensive reform of the CFP is currently under discussion by the European parliament and council, with the aim being to finalise negotiations by the end of 2013.

The primary authorities with responsibility for implementing the CFP are the Department of Agriculture, Food and the Marine in Ireland, the Marine Management Organisation (in cooperation with the Department for Environment, Food and Rural Affairs) in the UK.

Species-specific management:

Haddock in European waters is managed as a number of independent stocks, with the level of species-specific management implemented varying between management units. Management plans evaluated as precautionary by ICES are in place for haddock in Divisions VIa and IIIa, and Subarea IV. A management plan is currently under development for haddock in Division VIb. Haddock in Divisions VIIa-k are not subject to a management plan. All haddock stocks relevant to this assessment are subject to an annual TAC.

B. STOCK ASSESSMENT PROCEDURES AND MANAGEMENT ADVICE		
LEVEL OF COMPLIANCE		
<i>B. Research in support of fisheries management should exist.</i>		
LOW	Research to support the management of regional fisheries does not exist.	
MEDIUM	Research to support the management of regional fisheries exists; however research programmes are not specifically directed at the byproduct stock under assessment.	
HIGH	Research specifically targeting the byproduct stock under assessment is carried out in support of sustainable fisheries management.	
<p>Determination: <i>Research is carried out specifically to support the management of the species under assessment. There have been no substantial changes since the initial assessment.</i></p> <p>As with management measures, the level of scientific information available varies considerably between stocks. ICES conducts an annual assessment of each of the five relevant management units, and provides advice to fishery managers. Haddock in the Irish Sea is considered a data-limited stock, whereas estimates of MSY reference points exist for the other four populations. On balance although there is room for some improvement, the assessment team consider a rating of high compliance to be appropriate for this stock.</p> <p>R4 – R8</p>		H
C. STOCK STATUS		
LEVEL OF COMPLIANCE		
<i>C. The fish used to produce the fish By- Product is not considered to be critically at risk of over exploitation in accordance with the IUCN guidance.</i>		
LOW	The fish By-Product must not come from a species that is listed as extinct, or critically endangered by the IUCN.	
MEDIUM	The fish By- Product is from a species that is classified as vulnerable, but has a management regime in place that will control the level of fishing permitted. Alternatively if a species is listed as ‘not assessed’ or ‘data deficient’ by the IUCN and no additional information is available.	
HIGH	The fish By- Product comes from a fishery that is not deemed to be at risk of over exploitation from fishing activities. Alternatively if a species is listed as ‘not assessed’ or ‘data deficient’ by the IUCN but other sources of evidence (e.g. MSC certification) demonstrate that the species is not critically at risk.	
<p>Determination: <i>The byproduct comes from a species which is classified as vulnerable, but the existence of multiple MSC-certified haddock fisheries in the region is sufficient evidence to award the byproduct a medium compliance rating under this clause.</i></p> <p>The IUCN has categorised haddock as ‘vulnerable’. However, there are several haddock fisheries in the North-East Atlantic which have been certified against the MSC standard.</p> <p>R10 & R11</p>		M
