
FISHERY By Product SURVEILLANCE REPORT

IFFO GLOBAL STANDARD FOR RESPONSIBLE SUPPLY OF FISHMEAL AND FISH OIL

FISHERY By Product:	Pollock (<i>Pollachius pollachius</i>)
LOCATION:	UK & Ireland-Ices Area IVa-c, VI a, VIIa,b,d-h,j2
DATE OF REPORT:	18/02/2011
ASSESSOR:	Vito Ciccia Romito

Global Trust Certification Ltd, Rivercourt Business Centre, Riverlane, Dundalk, Co. Louth, Ireland Tel: 042 932 0912 Fax 042 938 6864

Form No: 9	Report Ref:	Page 1 of 5	CCM Code:

1. APPLICATION DETAILS AND SUMMARY OF THE ASSESSMENT OUTCOME		
Name: United Fish Industries/Welcon		
Address: [REDACTED]		
Country: Ireland	Zip:	
Tel. No. [REDACTED]	Fax. No.	
Email address: [REDACTED]	Applicant Code	
Key Contact: [REDACTED]	Title: [REDACTED]	
Certification Body Details		
Name of Certification Body:	Global Trust Certification Ltd.	
Assessor Name	Peer Reviewer	Initial/Surveillance/ Re-certification
Vito Ciccia Romito	Mike Platt	Surveillance
1. Scope of Assessment		
		By product surveillance
2. Fishery By Product		
		Pollock (<i>Pollachius pollachius</i>)
3. Fishery By Product Location		
		UK & Ireland-Ices Area IVa-c, VI a, VIIa,b,d-h,j2 (R6)
4. Fishery Method		
		Gill nets, Longlines, Handlines and Jiggers
5. Outcome of Assessment		
		Approved

2. GUIDANCE FOR ONSITE ASSESSMENT
Auditor to check that the fish by products used by the factory have had a fish by product surveillance.
3. ASSESSMENT DETERMINATION
Despite no scientific assessment of the stock is carried out, a precautionary TAC based on historic catch is set. The Pollock by product is approved for IFFO RS.

4. RATIONALE OF THE ASSESSMENT OUTCOME

A. THE MANAGEMENT FRAMEWORK AND PROCEDURE

LEVEL OF COMPLIANCE	
<i>The management of the fishery used to produce the by product must include a legal and administrative basis for the implementation of measures and controls to support the management of the fishery.</i>	
LOW	An administrative framework that ensures an efficient management of the fishery is not established.
MEDIUM	An administrative framework that ensures an efficient management of the fishery is somehow established, but there is evidence of not being efficient to ensure the management of the stock.
HIGH	A legal and administrative framework that ensures an efficient management of the fishery is established and works efficiently.

Determination: A legal and administrative framework that ensures an efficient management of the fishery is established and works efficiently.

H

Administrative and legal management framework EU/UK

The Common Fisheries Policy (CFP) is the fisheries policy of the European Union (EU). It allocates quotas from which member states are allowed to catch different amounts and species of fish. England, Scotland, Wales and the Northern Ireland and the Republic of Ireland are member states and respond to the CFP. The most important areas of action of the common fisheries policy are: laying down rules to ensure Europe's fisheries are sustainable and do not damage the marine environment (fishing effort limitations, catch limits, technical measures). The CFP provides national authorities with the tools to enforce these rules and punish offenders, as well as monitoring the size of the European fishing fleet to prevent it from expanding in an unrealistic way. The CFP provides, funding and technical support for initiatives that can make the fishing industry efficient. The CFP will also negotiate on behalf of EU countries within international fisheries organisations and with non-EU countries around the world, therefore helping producers, processors and distributors get a fair price for their seafood. The final function of the CFP is to provide funding for scientific research and data collection, to ensure a sound basis for policy and decision making (R1).

Compliance

Enforcement is the responsibility of each member state, but there is a community level inspection service to ensure that each member state enforce the rules within their own country (R1). **The Marine Management Organization (MMO) is responsible for enforcing the Common Fisheries Policy (CFP) in England.** Their role includes active management of fishery quotas within the overall limits set each year by the European Commission (R2). **Marine Scotland is the directorate of Scottish Government (SG) responsible for marine and fisheries issues in Scotland** including the **enforcement of marine and fisheries law and world class scientific and research work** (R3). **The Sea-Fisheries Protection Authority in Ireland** ensures that the marine fish and shellfish resources from the waters in **Ireland's EEZ** are exploited legally. The authority's main mission is to apply Sea Fisheries Conservation and Seafood Safety legislation in a fair and consistent manner (R4). Finally, the **Welsh Assembly Government assumes full responsibility for the management and enforcement of sea fisheries that surround Wales** (R5).

Management of Pollock

In **European waters** pollock are managed by precautionary TACs (5) usually based on previous catches. Pollock are subject to a minimum landing size in most European waters of 30cm, and regulations stipulate permitted mesh size ranges for both static and towed gears with which particular target species may be taken. Fishermen are only allowed to retain a limited level (5-70% dependent on mesh size and target species) of by catch of non target species. The use of 70-89mm static gears is banned and the use of static gear mesh sizes of greater than 120mm and a minimum trawl cod end mesh of 80mm for catching pollock encouraged (R7).

B. STOCK ASSESSMENT PROCEDURES AND MANAGEMENT ADVICE		
LEVEL OF COMPLIANCE		
<i>B. Research in support of fisheries management should exist.</i>		
LOW	Research to support the management of the stock does not exist.	
MEDIUM	Research to support the management of the stock exists, however research programmes could be significantly improved to decrease scientific advice uncertainty.	
HIGH	Research to support the management of the stock exists, and research programmes for provision of scientific advice are considered adequate.	
<p>Determination: Despite no scientific assessment of the stock is carried out, a precautionary TAC based on historic catch is set.</p> <p>Stock assessment and catches</p> <p>Although Pollock are not an assessed species the European Union sets a precautionary Total Allowable Catch (TAC) based on previous catches (this can be modified based on evidence provided to the EU by the Member State making the request) for this species in the various ICES areas (R7)</p>		M
C. STOCK STATUS		
LEVEL OF COMPLIANCE		
<i>C. The fish used to produce the fish by product is not considered to be critically at risk of over exploitation in accordance with the IUCN guidance.</i>		
LOW	The fish by-product must not come from a species that is listed as extinct, or critically endangered.	
MEDIUM	The fish by product is from a species that is classified as vulnerable, but has a management regime in place that will control the level of fishing permitted. Or if a species is deemed to be endangered but the sub-group from where the fish by product is harvested is deemed scientifically to be at no risk of over exploitation.	
HIGH	The fish by product comes from a fishery that is not deemed to be at risk of over exploitation from fishing activities.	
<p>Determination: the fish by product comes from a fishery that is not deemed to be at risk of over exploitation from fishing activities.</p> <p>Pollock (<i>Pollachius pollachius</i>) is not on the IUCN Red list and the species has an established management plan in place as illustrated in section 4A.</p>		H
